Session title

Molecular Approaches to Biodiversity and Ecology

Nasta Lianguzova

Faculty of Biology, Shenzhen MSU-BIT University

2026-10-30

Today you will be able to

- Do the first thing
- Do the second thing
- Interpret the third thing

Section title

Plain text slide with a glossary term

A **glossary term** is set in bold on the slide where it first appears. The same term, with a short plain-English definition, is in the pre-lecture glossary in Moodle.

- Bullet point
  - Sub-point
- Another bullet point with `inline_code()`

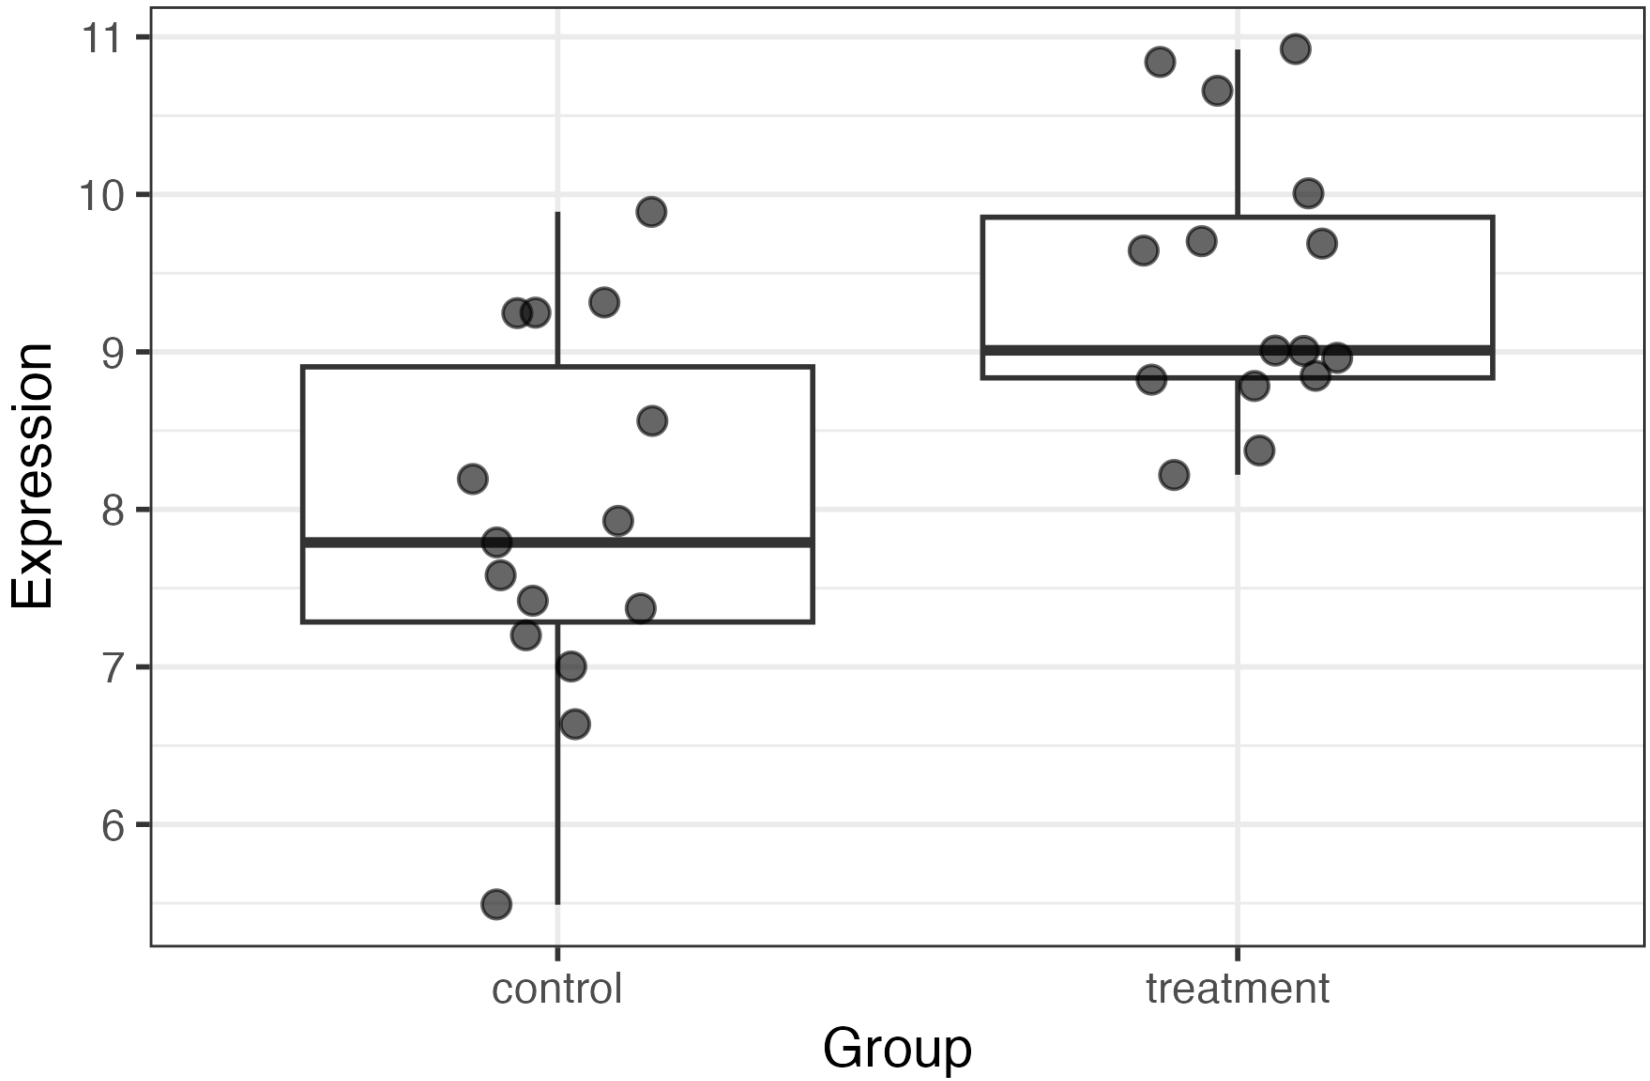

Inline math: $y_i = b_0 + b_1 x_i + e_i$

Code and output

```
dat <- read.csv("data/template_example.csv")
head(dat, 4)
##      gene   group gc_content expression
## 1 gene_01 control      0.624       9.25
## 2 gene_02 control      0.631       8.56
## 3 gene_03 control      0.436       5.49
## 4 gene_04 control      0.599       6.64
```

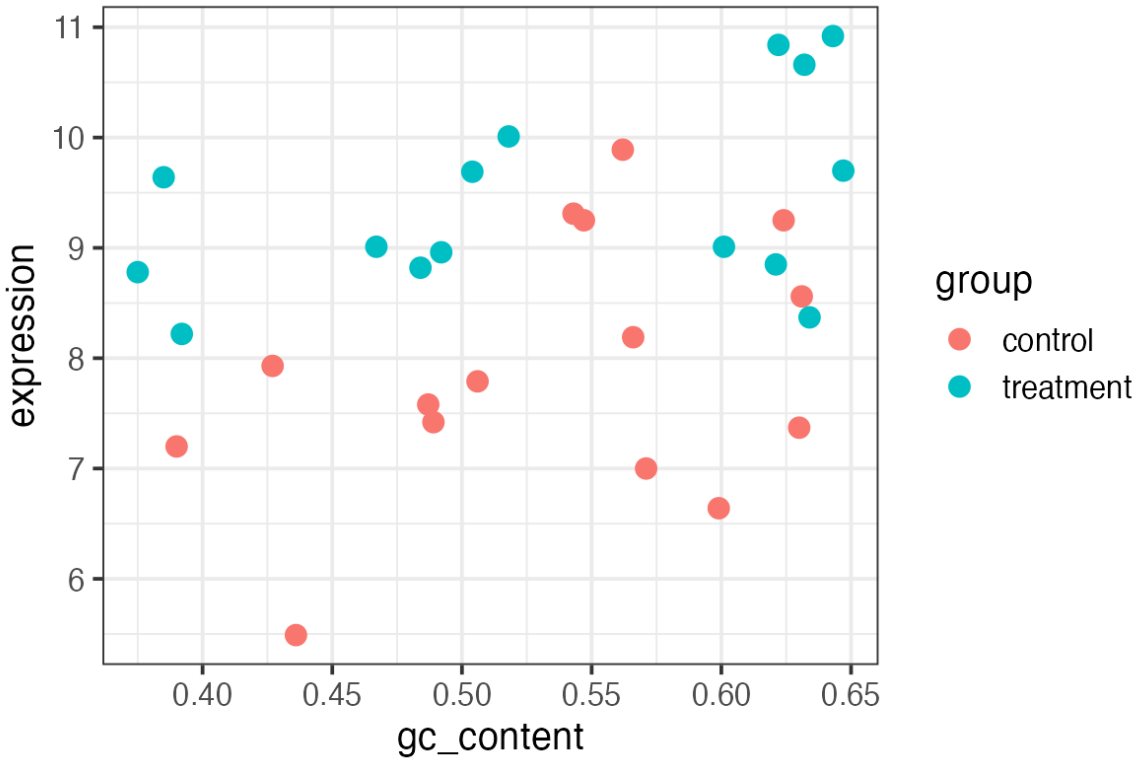

```
mean(dat$expression)
## [1] 8.678333
```

Figure with caption (from a chunk)

Expression level by group (simulated data).

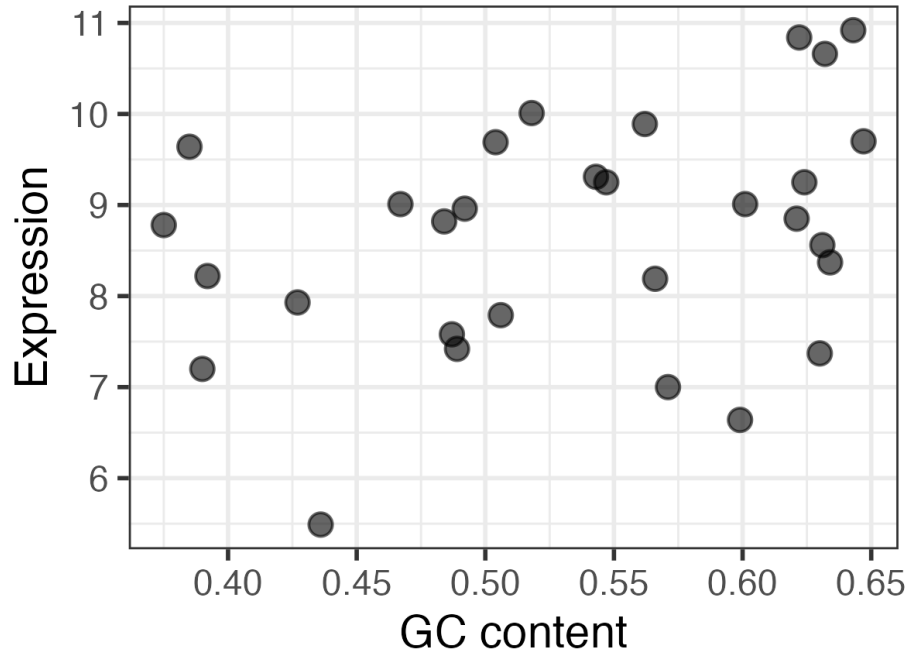

Figure with caption (from a file)

Caption for an image stored in `images/`. Image source: author / licence.

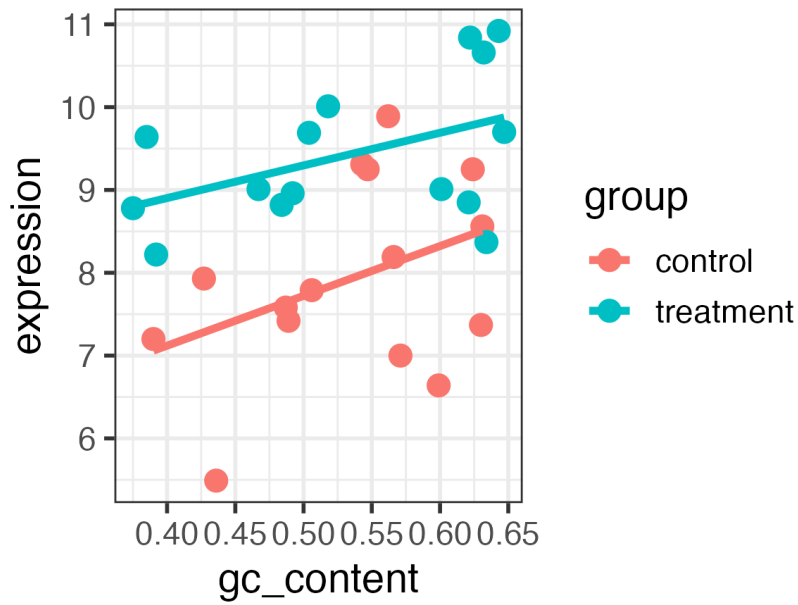

Two columns: text and figure

- Text in the left column
- The column widths add up to 100%
- `.t` aligns columns at the top: `{.column .t width="45%"}`

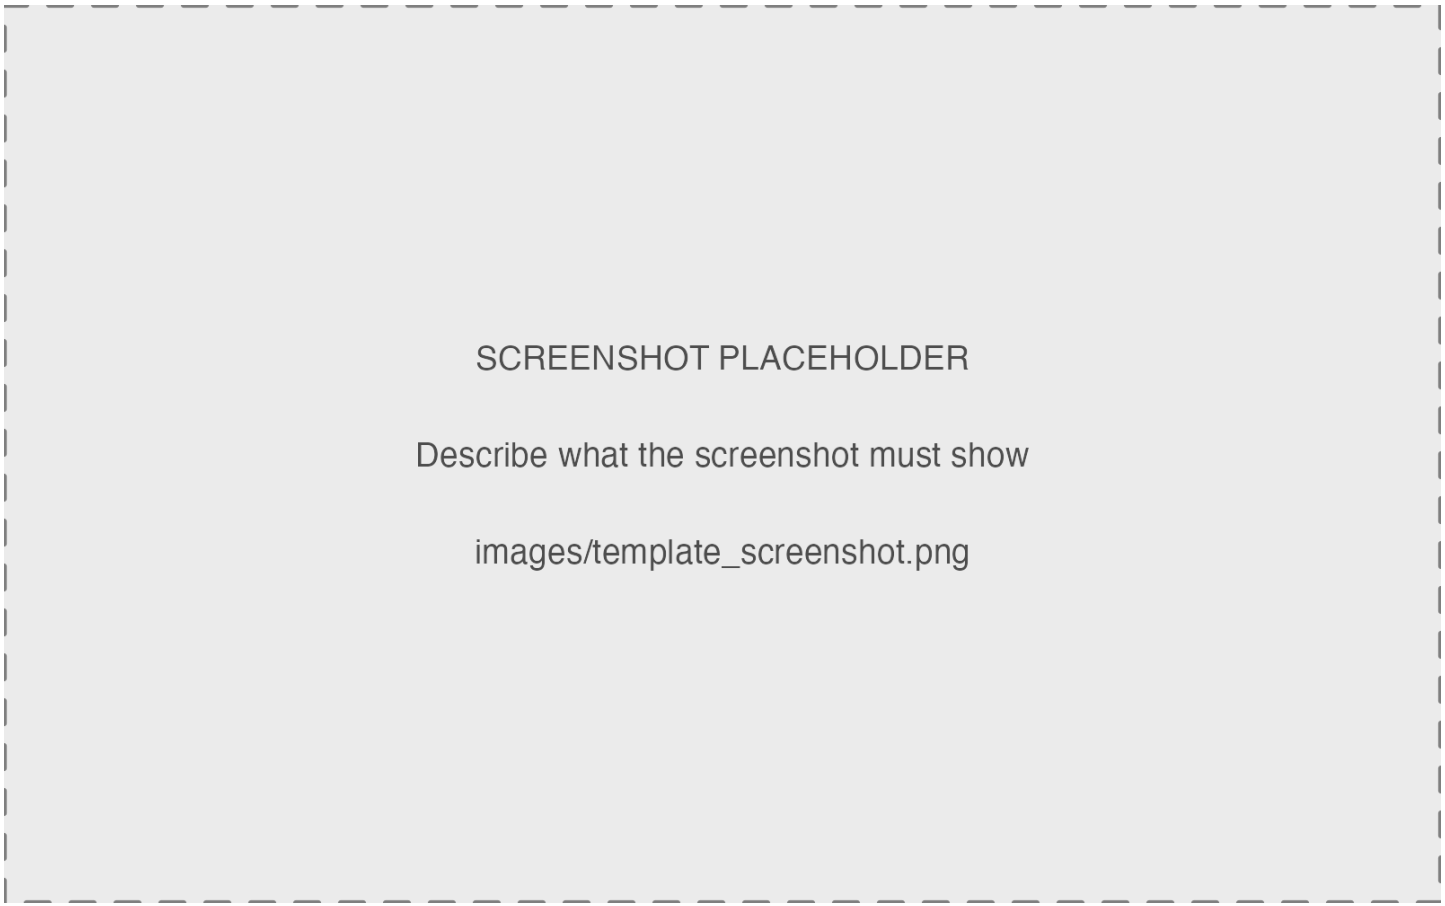

Two columns: code and figure

```
ggplot(dat, aes(x = gc_content,
                y = expression,
                colour = group)) +
  geom_point() +
  geom_smooth(method = "lm",
              se = FALSE)
```

Screenshot placeholder

The screenshot must show: [describe exactly what to capture and which parts to annotate].
